What is EFIS

- ECO Frequency Information System (www.efis.dk)
- Launched in 2002
- EFIS is the tool to fulfil EC Decision 2007/344/EC on the harmonised availability of information regarding spectrum use in Europe and ECC Decision (01)03
- EFIS is an information system – it is not a spectrum planning tool
- ECO cannot be held responsible for any incorrect information in the EFIS system
- EFIS hosts only public information
• EC Decision 2007/344/EC
  – Article 2 - Member States shall use the EFIS as a common access point, in order to make comparable information regarding the use of spectrum in each Member State available to the public via the Internet.
What data is held in EFIS

• ECO maintains content in EFIS
• ECO works with EFIS Maintenance Group (EFIS-MG) for EFIS Terms, [ECC Decision (01)03 Annex 2](#), [European Common Allocation Table (ECA Table)](#) and improvements to the database
• [National Frequency Tables](#)
• Administrations have accounts in order to update national data and they can set their status according to their own national regulations
What data is held in EFIS

- You may search on:
  - Frequency band
  - Allocation
  - Application
  - Documents (categories are regulatory and informative)
  - Interfaces
  - Rights of Use
  - Information

- Data can be displayed in table form or graphically and can often be exported in CSV format (Graphical Visualisation).
How EFIS holds data

• EFIS maintains all information for
  – Recommendation 70-03
  – ECO Report 03
  – ECO Report 04
  – European Common Allocation Table (ECA Table) in ERC Report 25

• ECO creates updates of these above ECC deliverables based on data in EFIS. There is no master data or document outside EFIS.
How to get EFIS data updated

- ECO is tasked with updating the basic information in EFIS
  - EC Decisions
  - ETSI Harmonised standards
  - ETSI SRdocs
- ECC Decisions, Reports, Recommendations
- ECC may decide if the change is sufficient to “reset” national implementation
